“Experience **enriched collaboration**
through focused communications.”

imanager

Global Internal Communications

Speakerbus' solutions are used in many locations throughout the world, with clients privately linking over 50 locations worldwide.

With every call, clients benefit from instant peer-to-peer exchanges and ad-hoc discussions, delivering more engaging internal interactions.

“The iManager Communications Server (iCS) is a powerful, soft switch based communication platform, delivering collaborative voice solutions through multiple intercom services.”

Speakerbus' expertise in providing mission critical communications and extensive experience with SIP technology reinforces our capability as a trusted supplier to global organisations.

The iCS is based upon a next generation architecture, leveraging open standards and builds upon the best of breed capabilities from an ecosystem of technology partners in a Service Orientated Architecture (SOA).

Deployable in single and multi-site configurations, iCS is highly scalable from low user count stand-alone solutions to global enterprise facilities.

"Gain a competitive edge with improved communications efficiencies."

“iCS increases the global reach of time critical information for your business. Instantly linking counterparties and enhancing situational awareness.”

Instant communication with local, regional and global counterparties improves the flow of information leading to more informed decision making. Businesses are always striving for a competitive edge; the iCS collaborative architecture enables business to react to market and environmental events before their competitors.

iCS offers users the ability to select from a choice of interactions. Users can contact each other directly or choose to distribute information to multiple parties. Teams have access to a constant flow of information including, breaking news, market data, business and situational updates.

Together these tools lead to an increasingly informed user community which in turn enhances collaboration driving business and workflow efficiencies.

“Internal communication channels
have **choice and flexibility.**”

*i*manager

"iCS' range of robust endpoints are specifically designed for the individual needs of users in the most demanding markets"

iCS caters for users with light, moderate and intense demands delivering a suite of advanced endpoints designed for optimal ergonomics and clarity. iCS' flexible range of endpoints offer powerful natural voice delivered through single or multiple channels with a choice of audio input devices.

Speakerbus' endpoints follow a simple methodology of user-centred design; exploiting visual elements; contextual soft keys and intuitive menus, supporting agile responses in every situation.

Using features such as; call priorities, alert selection, customised directories and channel selection, users are able to personalise their collaborative experience enhancing their productivity. With iCS, internal communication channels now have greater choice and flexibility.
